PROFILE

Software professional with 2+ years of experience managing and delivering client-facing software projects across web and mobile applications. Experienced in requirements gathering, understanding business needs, coordinating with technical teams, managing feature development, testing, client feedback, and final delivery. Strong technical background enables effective communication with developers and understanding of APIs, databases, integrations, and application architecture. Experienced in working across multiple projects while managing changing requirements, technical issues, priorities, and delivery timelines.

CORE COMPETENCIES

Requirements Gathering	Stakeholder Communication
Project Coordination	Client Communication
User Stories and Acceptance Criteria	Feature Planning
Task Prioritization	Agile and Scrum
Software Development Lifecycle	UAT and Quality Validation
Functional Requirements	Technical Documentation
Cross-functional Collaboration	API and Integration Analysis
Problem Solving	Root Cause Analysis

EDUCATION

Bachelor of Science in Computer Science, FAST NUCES, Lahore 2020 – 2024 -

WORK EXPERIENCE

Software Developer, Chakor 2024 – Present

- Managed client-facing software projects from requirements gathering and feature planning through development, testing, client feedback, and final delivery.
- Worked directly with clients to understand business requirements, clarify expectations, communicate progress, and incorporate feedback into product improvements.
- Translated business requirements into clear functional requirements and actionable development tasks.
- Coordinated with clients and technical team members throughout the Software Development Lifecycle to ensure features were implemented according to requirements.
- Managed multiple project requirements and priorities while working toward agreed delivery timelines.
- Analyzed existing functionality, identified gaps and technical issues, and worked with technical team members to determine practical solutions.
- Worked with third-party APIs and integrations to understand requirements, dependencies, limitations, and implementation approaches.
- Supported testing and quality validation by reviewing completed features against requirements and resolving functional issues before delivery.
- Provided regular project updates to clients and communicated technical constraints, implementation progress, and blockers.
- Maintained project and technical documentation to support development, testing, and ongoing product improvements.

Software Engineer Intern, Qwerty Experts 2023

- Collaborated with team leads and developers to implement application features based on functional requirements.
- Worked on mobile applications using React Native and backend functionality using Node.js and MongoDB.
- Investigated application issues, implemented fixes, and supported testing and feature delivery.
- Incorporated client and user feedback into application improvements.

PROJECT EXPERIENCE

Health Wallet (Live)

- Worked on a digital health wallet platform involving employees, organizations, administrators, and healthcare providers.
- Managed requirements and implementation of automated quarterly allocations and annual account resets.

- Coordinated business logic and scheduled workflows to ensure accurate financial processing.
- Investigated functional issues and worked through workflow requirements to ensure expected outcomes.

Athlete – Fitness Application (Website)

- Contributed to the delivery of a cross-platform fitness application from feature requirements through implementation, testing, and release.
- Coordinated requirements involving Strava, Garmin, and Apple HealthKit integrations.
- Worked on features for fitness metrics including VO2 max, endurance, and functional strength tracking.
- Supported application testing and release activities for both Apple App Store and Google Play Store.

AnchorShareLock (Live)

- Worked on a role-based locker rental platform supporting Admin, Customer, and Franchisee workflows.
- Defined and implemented requirements across multiple user roles and business processes.
- Worked on subscription billing, Stripe payment workflows, revenue sharing, and platform service fees.
- Coordinated workflow requirements and resolved functional issues across interconnected features.

Shaping Homes (Github)

- Worked on a cross-platform mobile application involving frontend, backend, API, and AI-powered functionality.
- Translated application requirements into functional workflows and coordinated implementation across frontend and backend components.
- Designed and consumed REST APIs and worked through integration requirements and technical dependencies.

SKILLS AND TECHNOLOGIES

Project Management	Agile, Scrum, SDLC, Project Coordination, Task Management, Feature Planning, Prioritization, UAT
Product and Requirements	Requirements Gathering, Functional Requirements, User Stories, Acceptance Criteria, Feature Specifications, Gap Analysis, Process Analysis
Stakeholder Management	Client Communication, Stakeholder Collaboration, Progress Updates, Requirement Clarification, Cross-functional Collaboration
Technical	REST APIs, API Integrations, Database Concepts, Workflow Architecture, JavaScript, Node.js, React Native, Flutter, Bubble.io, FlutterFlow
Integrations	Stripe, OpenAI, Gemini, Xero, Plooto, Strava, Garmin, Apple HealthKit
Tools	GitHub, Postman, Figma, VS Code, Android Studio
